Hi-PE
HIGH PERFORMANCE MULTI-ZONE METAL DETECTOR

Accurate Detection

- Capable of detecting a wide range of threat objects composed of magnetic, non-magnetic metals and mixed alloys
- Quick, accurate analysis of all parts of the body of people in transit, from the shoe level to the crossbar

The HI-PE is a high performance walk-through Multi-Zone Metal Detector which meets all International Security Standards. A "height on person" display actually indicates, by means of illuminated LED’s, the position of the weapon on the person.

The HI-PE allows a high level of discrimination between significant metal masses, such as the weapons which are to be detected, and personal metal effects.

Exceptional immunity to environmental interferences makes it easy to use even when electrical noise is encountered. The detection capability is independent of the transit speed.

Breakthrough Value

- Superior CEIA reliability slashes total cost of ownership
- No periodic re-calibration and preventive maintenance required

The overall system is characterized by sturdy, reliable electronic and mechanical construction, and ease of installation.
